

SP02 FINGER PROBES/ EXTENSION CABLES

Tenacore provides repairs service on a number of reusable Pulse Oximeter Sensor Probes and Adapter/Extension Cables regardless of the problem. We use only new parts, testing every sensor on a SpO2 analyzer and OEM monitor before returning the repair items back to our customers.

Most hospitals find that it is more cost-effective to repair their SpO2 probes and cables rather than replacing them.

Repairs and testing procedures adhere to OEM standards.

We repair the following OEM SpO2 products:

- BCI
- Corometrics
- Criticare
- Datascope
- Datex
- GE/Marquette
- HP/Philips
- Invivo
- Masimo
- Nellcor
- Nihon Koden
- Nonin
- Novametrix
- Ohmeda
- Spacelabs
- and more
